DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, 47 and 48, are drawn to inductive interconnection systems, classified in class 307, subclass 104.
 - II. Claims 29-46, are drawn to condition responsive switching systems, classified in class 307, subclass 116.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination only requires bi-directional data exchange by transducer coupling and not the data channel selection circuitry of invention II. The subcombination could be used in any environment where dual-band/channel is required.
